

In the News

An employee at a UK-based satellite network operator opened an email attachment with a Trojan that spread quickly across the organization's network. Impact: The network was down for several days; even elevators and AC units were shut down.

Key Facts

Fact: A typical 500-employee company receives almost 100,000 spam messages every day—25,000 of those messages have a malicious intent.

Fact: One in three small and medium businesses believes that a severe malware attack would put them out of business.

Email Security for Midsize Organizations

Email is one of the top five attack vectors faced by midsize business. Protecting your email systems (and employees who depend on email) should be part of a total security solution that also addresses the other critical vectors you must defend: the web, systems, networks, and data. But whether you address all five areas in a unified approach or concentrate on strengthening your email protection, McAfee has proven products and a dedicated focus to meet the requirements of your organization.

Strengthening Email Safeguards

Email is an indispensable tool for businesses today, but it's also a favorite vehicle for spammers and cybercriminals. Not only does spam drain productivity, it can also lure employees to visit inappropriate or malicious websites, putting both the company and the user at risk.

Unfiltered outbound email can be just as damaging. Unintentional or not, sensitive or regulated information can easily leak out of the organization via email, subjecting the company to substantial regulatory or financial penalties. Your email filter needs to stop all spam and email-based threats, but it must also be able to scan outbound messages and ensure company policy is always enforced.

McAfee® email security products empower businesses like yours by enabling you to:

- *Repel all inbound threats*—Identify and block spam with over 99 percent accuracy; protect against viruses, malware, phishing, directory harvest, denial of service, and zero-hour threats
- *Protect your investments*—Prevent malicious threats from damaging your email servers or infecting your systems
- *Stop outbound data loss*—Inspect incoming and outgoing email traffic for sensitive or regulated data
- *Improve efficiency*—Maintain employee productivity and reduce wasted email server storage by blocking messages that contain specific words in the subject line, body, or attachments
- *Stay ahead of threats*—Take advantage of McAfee Global Threat Intelligence, which analyzes more than 110 billion email messages per month to create the world's most precise and comprehensive email and Internet reputation system

15 Minutes a Day to Email Security (and Complete Protection)

The McAfee "15 Minutes a Day" approach to email security is built on a daily practice of monitoring systems and taking steps intended to keep your protection up to date. For example, you can monitor email server protection on a daily basis, quickly discover which systems are not in compliance, and then take steps to update your virus and spam definitions as needed. The McAfee approach arms you with a strategy and repeatable process you can use to fight email-based threats (and all security concerns) in a matter of just a few minutes a day. With McAfee products you can:

- Assess and update email gateway defense
- Review and tune content filters at gateway
- Manage quarantined emails
- Confirm email server spam and AV protection
