

Web Security for Midsize Organizations

The web is one of the top five attack vectors against midsize organizations. Protecting your company against web-borne threats should be part of a total security solution that also addresses the other vectors you must defend: email, systems, networks, and data. But whether you want to address all five areas or concentrate on improving your web security, McAfee has a choice of solutions to meet the requirements of your organization including on-premises and Security-as-a-Service options.

In the News

At an independent provider of call-management systems, an end user visited “the wrong website” and unknowingly downloaded malware. Impact: Affected applications and files on 500 desktops and 500 servers; the company was shut down for three days.

Key Facts

Fact: More than 70 percent of the most popular sites contain malicious content or hidden redirects.

Fact: One in three small and medium-size organizations believes that a severe malware attack would put them out of business.

Defending a Critical Gateway

Browsers are the least-protected and therefore easiest medium for transferring malware, which helps to explain the increase in browser-based attacks. Cybercriminals are constantly creating innovative attacks such as spear phishing and bogus “money-saver” websites to take advantage of employees and inadequate IT safeguards. Employees themselves are sometimes guilty of visiting sites that are dangerous or simply inappropriate. In either case, the web can seem like a minefield for organizations trying to conduct legitimate business.

McAfee® web security products empower businesses like yours by enabling you to:

- *Get strong, real-time threat protection*—Benefit from always-on, active malware protection and global reputation intelligence to stop even the latest Web 2.0 threats before they can enter your network
- *Enable productive use of Web 2.0*—Confidently use Web 2.0 within your organization by leveraging strong content, reputation, and category-based filtering
- *Stop data loss*—Scan user-generated content and protect against confidential information leaking from the organization through blogs, wikis, and other Web 2.0 applications and sites
- *Reduce liability*—Prevent employees from visiting unauthorized or inappropriate websites
- *Ensure flexible security policies*—Vary web usage policies within your organization by job requirement or by working hours
- *View web usage trends*—Review trends in organizational web usage to refine policies and optimize productivity

15 Minutes a Day to Web Security (and Complete Protection)

The McAfee “15 Minutes a Day” approach to securing the web gateway is built on a daily practice that’s designed to help you achieve the best balance of permissions and restrictions for web browsing and downloading. With McAfee products you can:

- Assess and update the web gateway defense
- Manage URL filtering and provide employees with security information about websites they visit
- Ensure your perimeter filters are current with the latest protection available
- Be aware of and prevent visits to malicious or inappropriate web sites
- Review content filters at gateway
