

Network Security for Midsize Organizations

Your network is one of five vulnerabilities faced by midsize organizations. Protecting your company against unauthorized user access, intrusions, etc., should be part of a total security solution that also addresses the other vulnerabilities you face: email, the web, systems, and data. But whether you want to address all five areas or concentrate on network protection, McAfee has proven products and a dedicated focus to meet the requirements of your organization.

In the News

A small regional bank with 15 branch offices in the Southwestern US was hacked by cybercriminals, who stole bank account numbers, created new PINs, and fabricated debit cards. Impact: Significant cash lost, customer confidence eroded after apologies sent to every single customer.

Key Facts

Fact: Some small and medium-size businesses claim that as much as 50 percent of their network bandwidth is wasted on malware, botnet activities, and other improper traffic.

Fact: Industry analysts believe that up to 70 percent of company firewalls are configured incorrectly, creating security gaps in networks that companies believe are protected.

Fact: One in three small and medium-size organizations believes that a severe malware attack would put them out of business.

Network Protection that Never Sleeps

Strong network security—particularly at the gateway—is critical, and yet most midsize businesses aren't even aware of the number of threats or vulnerabilities that exist on their networks. These days, a significant source of network attacks can come from within. At one supplier of point-of-sale kits for fast-food chains, a fired worker wreaked his revenge by seeding malware on his ex-employer's computer network from his home PC. The assault affected 25 servers at different restaurant locations and resulted in \$49,000 in clean-up costs.

McAfee® network security products empower businesses like yours by enabling you to:

- *Gain greater visibility across the network*—Get a real-time view of what users are doing on the network and compare it against security and business policies to minimize legal liability
- *Eliminate unauthorized access*—Allow only authorized users and devices and prevent noncompliant systems from accessing or infecting your corporate network
- *Create impenetrable protection layers*—Implement a fully integrated solution, including intrusion prevention, firewalls, VPNs, and web and mail filtering
- *Leverage real-time intelligence*—Use McAfee Global Threat Intelligence to advise your network of threats before they are even created

15 Minutes a Day to Network Security (and Complete Protection)

The McAfee “15 Minutes a Day” approach to securing the network is built on a daily practice that's designed to help you minimize risk of outbreaks while allowing the right level of flexibility. It includes steps to protect your network from zero-day threats, isolate infected guest devices, and monitor the network to accurately assess behaviors and threats. By reviewing a central dashboard and reports, such as those provided by McAfee ePolicy Orchestrator®, you can determine protection levels, ensure your perimeter filters are current with the latest protection available, and achieve the best balance of permissions and restrictions across the network. With McAfee products you can:

- Review network-based incidents
- Update network protection
- Monitor perimeter security protection

To learn more about how you can protect your network including detailed step-by-step instructions for implementing total security in just 15 minutes a day, visit www.mcafee.com/mid/secure15
